# Minutes meeting 2016-05-17

## Agenda

- Contributor CLA
- Discuss research report
- Spoofax-related issues
  - Parsing incomplete terms
  - CompletionService remains empty
  - Start symbol paplj is wrong
  - Spoofax crashes (perhaps because of tracing)
  - Evaluation context

## Contributor CLA

Hendrik will fix this.

## Discuss research report

Feedback is not really needed right now, but we do need it for the final report. We will start on this in three to four weeks, so by then we should have feedback.

## Spoofax-related issues

### Parsing incomplete terms

- Talk with Eduardo or Gabriel about this.

### CompletionService remains empty

- Talk with Eduardo about this.

### Evaluation context

- Probably Dynsem returns environments as well, which we can pass on to the next Dynsem call.
- Interfaces for different backends (Dynsem, IceDust Java backend...). At least keep this in mind for the architecture. Evaluation thus depends on the language.
- Perhaps create an own ESV facet to configure such things (e.g. backends, default evaluation commands, et cetera).
